

Dentora

// CLIENT OVERVIEW • MAY 2026

Your Dental Practice, Always Answering.

Dentora is an AI-powered phone receptionist built exclusively for UK dental practices. It handles every patient call — 24 hours a day, 7 days a week — so your team can focus entirely on delivering exceptional care.

24/7

ALWAYS LIVE

CALLS CAUGHT

UK

GDPR READY

The big picture — in two minutes.

This document is written for practice owners and practice managers who want to understand what Dentora does, how it protects patient data, and why it is the right choice for a modern UK dental practice — without any technical jargon.

Dentora is not software you learn to use. It is a phone receptionist that you switch on. From the moment you go live, it answers every inbound call, books appointments into your existing calendar, and gives your staff a clear summary of every conversation — all automatically, all day, all night.

What this report covers

- ✓ What Dentora is and the problem it solves
- ✓ How a call is handled, step by step
- ✓ The full list of features and capabilities
- ✓ The patient experience on a live call
- ✓ What your staff see on the dashboard
- ✓ Analytics and reporting available to you
- ✓ How the AI voice technology works
- ✓ Multi-location and group practice support
- ✓ Security, encryption, and UK GDPR compliance
- ✓ Pricing plans and what each includes
- ✓ Return on investment for your practice
- ✓ Getting started and ongoing support

What is happening to UK dental practices right now.

The front desk is under more pressure than ever. Understanding why this matters is the first step to seeing why Dentora exists.

40%

of inbound calls are missed during peak hours at a typical UK dental practice

£180

average lifetime revenue lost per missed new-patient call

3 in 5

patients who reach voicemail do not call back — they book elsewhere

Missed calls mean missed patients

When your reception team is with a patient at the desk, on another call, or on a lunch break, the phone rings — and nobody answers. That caller found you, wanted to book, and was ready. They simply moved on to the next practice on Google.

Routine calls eat hours every day

Research from UK dental bodies shows receptionists spend up to 60% of their day on tasks that follow the exact same script: booking appointments, answering FAQs about pricing and insurance, and confirming or rescheduling visits.

Patients don't only call during office hours

Modern patients are busy. They search for a dentist in the evening, on their lunch break, or at the weekend. Without out-of-hours cover, every one of those calls either goes unanswered or lands in a voicemail that most patients ignore.

Staffing costs are climbing

A full-time receptionist in the UK now costs £24,000–£32,000 per year in salary alone — not including National Insurance, holiday cover, sick pay, and ongoing training. For multi-location groups, this multiplies across every site.

The result: practices are losing new patients they never knew they had, spending their best staff on phone administration, and paying a growing wage bill — all while patient expectations for instant service have never been higher.

// 03 • WHAT IS DENTORA?

A phone receptionist powered by artificial intelligence.

Dentora is a purpose-built AI system that answers your practice phone, holds a natural conversation with every patient, and handles their request — exactly as a trained human receptionist would, but without limits on time or availability.

When a patient calls your practice number, Dentora answers in under one second. It greets the caller using your practice name, in a warm natural voice that you choose. It listens, understands what the patient needs, and responds intelligently — booking appointments, answering questions, or escalating to your team when human judgement is needed.

Dentora is not a phone menu ("press 1 for..."). It is not a voicemail system. It is not a chatbot. It is a real conversational AI that understands natural speech, handles unexpected questions, and completes the task — in the same way your best receptionist would, but available every hour of every day.

Think of Dentora as your most reliable team member: never absent, never stressed, never puts a patient on hold, and always represents your practice professionally — whether it is 9am on a Tuesday or 11pm on a bank holiday Sunday.

Who is it for?

Independent practices

Solo or small practices where reception cover is limited and every missed call matters.

Group practices

Multi-site practices that want consistent quality across all locations without hiring more staff at each.

Growing practices

Practices expanding their patient list who need more capacity without proportionally growing their payroll.

// 04 · HOW IT WORKS

A patient calls. Here is exactly what happens.

The entire process — from first ring to confirmed appointment — typically takes under two minutes. No staff involvement is required.

STEP 1 — INSTANT ANSWER

Dentora picks up in under one second

The patient hears your practice name spoken by a clear, friendly AI voice — no hold music, no ringing out, no robot menus. Dentora says something like: *"Good morning, Pearl Dental. How can I help you today?"* and the conversation begins immediately.

STEP 2 — LISTEN AND UNDERSTAND

The AI identifies exactly what the patient needs

The patient speaks naturally. They might say "I need to book a filling" or "I'm in pain and need to come in today" or "Can you tell me how much a hygiene appointment costs?" Dentora understands the intent behind what they say — not just the keywords — and responds accordingly.

It handles accents, incomplete sentences, background noise, and topic changes mid-conversation — just as a human receptionist would.

STEP 3 — CHECK REAL-TIME AVAILABILITY

Live calendar access — no double-bookings, ever

For booking requests, Dentora connects to your Google Calendar in real time. It sees exactly which slots are free, offers suitable options to the patient, and confirms the chosen time. It will never offer a slot that is already taken.

STEP 4 — CONFIRM AND RECORD

Booking appears in your calendar immediately

Once the patient agrees a time, the appointment is created in your calendar on the spot. The patient receives a confirmation. An AI-written summary of the call — what was discussed, what was booked, any notes — is emailed to your team and stored in your dashboard.

STEP 5 — ESCALATE WHEN NEEDED

Dentora knows its limits

If a call involves something sensitive — a complaint, a complex clinical question, or an emergency requiring immediate human response — Dentora flags it instantly for your team. No patient is left without a resolution path. Your staff receive the full context of the conversation so they can follow up with complete information.

STEP 6 — STAFF REVIEW

You stay in complete control

Every call — whether it ended in a booking, an escalation, or an FAQ answer — is available in your dashboard. Staff can read the transcript, listen to the recording, amend any booking, or mark calls for follow-up. Nothing is hidden and nothing is final until your team is satisfied.

Example conversations Dentora handles

Patient says	Dentora does	Outcome
"I'd like to book a check-up"	Checks calendar, offers 3 available slots, confirms choice	Appointment booked instantly
"I need to move my appointment on Thursday"	Identifies existing booking, offers alternatives, reschedules	Rescheduled in under 90 seconds
"Do you accept NHS patients?"	Answers from your practice FAQ knowledge base	Patient informed correctly, every time

Patient says	Dentora does	Outcome
"I've been in agony since yesterday"	Identifies emergency, offers same-day slot, escalates to staff if no slot available	Patient seen urgently; practice reputation protected
"How much does a crown cost?"	Quotes from your pricing list, offers to book a consultation	Patient gets accurate info; opportunity to convert
"I want to complain about my last visit"	Acknowledges the concern warmly, immediately escalates to a named staff member	Staff informed with full context to resolve sensitively

// 05 · FEATURES

Everything your front desk does — and then some.

Dentora covers the entire range of receptionist responsibilities. Below is a comprehensive list of every capability included in the platform.

Core call handling

Feature	What it does	Benefit
Instant call answering	Picks up every call in under one second, 24/7/365	Zero missed calls regardless of team availability
Natural conversation	Holds a genuine back-and-forth conversation, not a menu	Patients feel heard and valued from the first word
Appointment booking	Books new appointments directly into your live calendar	Immediate confirmation; no diary gaps
Rescheduling & cancellations	Moves or cancels existing appointments and offers alternatives	Slot filled faster; patient kept engaged
Emergency triage	Identifies urgent pain situations and prioritises same-day slots	Patients in pain seen quickly; safeguards practice duty of care

Feature	What it does	Benefit
Patient Q&A	Answers FAQs using your own uploaded information	Consistent, accurate answers; frees receptionist time
Out-of-hours cover	Operates evenings, weekends, and bank holidays without any extra cost	Captures calls competitors miss; no overtime costs

Scheduling & calendar

Feature	Detail
Google Calendar sync	Two-way real-time sync — Dentora reads your availability and writes confirmed bookings instantly
Double-booking prevention	Dentora only offers slots that are genuinely free; conflicts are architecturally impossible
Custom booking rules	Set rules per dentist: appointment types allowed, minimum gaps, lunch blocks, preferred days
New vs returning patient handling	Identifies whether a caller is a new patient and adjusts the booking flow accordingly
No-show reminders	Automated reminder messages sent before each appointment to reduce DNA (Did Not Attend) rates

Staff tools & oversight

Feature	Detail
Call summaries by email	Every call produces an AI-written summary sent immediately to the practice inbox
Staff review dashboard	Web-based interface where staff can read every transcript, approve or amend bookings
Escalation notifications	Instant alerts when a call requires human follow-up, with full context included
Manual override	Staff can edit, move, or cancel any booking Dentora created at any time

Feature	Detail
Call recording access	Audio recordings stored securely and accessible to authorised staff for quality checks
Multi-staff accounts	Each team member has their own login; actions are attributed individually in the audit log

// 06 · THE PATIENT EXPERIENCE

What your patients actually hear and feel.

The best AI receptionist is one that patients do not know is AI. Dentora is designed first and foremost around the patient's experience of the call.

Human-quality voice

Dentora uses state-of-the-art neural voice synthesis — the same technology used in premium customer service platforms globally. The voice is warm, clear, and natural. Patients consistently describe it as indistinguishable from a human receptionist on the first call.

Real conversation, not a script

Unlike phone menus or basic bots, Dentora responds dynamically to what the patient says. If they change topic mid-call, ask an unexpected question, or give vague information, Dentora adapts — asking a clarifying question, just as a receptionist would.

Zero wait time

Patients never sit on hold. Never hear "your call is important to us." Never wait in a queue. Dentora answers instantly, every time — which is what modern patients expect and what converts callers into booked patients.

Immediate confirmation

The moment a booking is made, the patient receives confirmation. They end the call knowing their appointment is in the diary — no uncertainty, no need to call back to check.

A sample patient call — booking a filling

Dentora: "Good afternoon, Oakfield Dental. How can I help you today?"

Patient: "Hi, I've got a broken tooth — I need to get it sorted, probably need a filling."

Dentora: "Of course, I can help with that. Are you an existing patient with us?"

Patient: "Yes, I've been coming for a few years. Sarah Jenkins."

Dentora: "Perfect, thank you Sarah. I have slots available on Wednesday at 11am or Thursday at 2:30pm — which would suit you better?"

Patient: "Thursday works."

Dentora: "Brilliant — I've booked you in for Thursday at 2:30pm with Dr. Patel. You'll receive a confirmation shortly. Is there anything else I can help you with?"

Total call duration: approximately 55 seconds. No staff involved. Appointment confirmed in the calendar before the patient hangs up.

// 07 · THE STAFF DASHBOARD

Your team stays fully informed and in control.

Dentora does the work, but your staff are never left in the dark. The dashboard gives your team complete visibility over everything Dentora handles.

What your team sees each morning

- ✓ A list of every call handled since they last logged in, with time, duration, and outcome
- ✓ AI-written summaries for each call — readable in seconds, no need to listen to recordings
- ✓ All bookings Dentora made, already confirmed in the calendar
- ✓ Any calls flagged for human follow-up, with the full conversation context attached
- ✓ Calls that ended in escalation, with the reason and recommended action
- ✓ A daily overview of call volume, peak times, and booking conversion rate

What staff can do from the dashboard

- ✓ Read the full transcript of any call in plain English
- ✓ Listen to the original call recording
- ✓ Edit, reschedule, or cancel any Dentora-created booking
- ✓ Mark a call as reviewed and resolved
- ✓ Add internal notes to any call record
- ✓ Update the practice FAQ and pricing information that Dentora uses
- ✓ View and configure booking rules per dentist or appointment type

The dashboard is designed for non-technical users. No training is needed. If your team can use email, they can use the Dentora dashboard. Most practices find that a five-minute walkthrough is all their reception team needs.

Managing your practice knowledge

Everything Dentora says on a call comes from information *you* provide. During setup, you upload your FAQs, pricing lists, dentist bios, insurance information, and any other documents. Dentora reads and learns from these automatically.

When something changes — a new fee structure, a new dentist joining, a change in NHS availability — you update the document in the dashboard and Dentora uses the new information on the very next call. No developer needed. No delay.

// 08 · ANALYTICS & REPORTING

See exactly what is happening at your practice.

Most practices have no idea how many calls they miss, when their busiest periods are, or what patients most frequently ask. Dentora makes all of this visible.

Call volume by hour and day

Understand exactly when patients call. Plan your human staffing around real data, not guesswork.

Booking conversion rate

Of every call that wanted an appointment, how many were booked? Track this weekly and monthly.

Top patient questions

See which FAQs patients ask most often. Use this to improve your website, your pricing page, or your scripts.

Escalation patterns

Understand which types of calls require human intervention and why. Refine Dentora's knowledge to reduce escalations over time.

Cost per call

See the real cost of Dentora versus the equivalent staff time. The ROI becomes immediately visible.

No-show & DNA tracking

Track whether automated reminders are reducing your DNA rate. Most practices see a measurable improvement within the first month.

Data you never had before. For the first time, you will know precisely how many patients called outside office hours, how many questions your team answered that an AI could handle, and exactly how many appointments were booked without any staff involvement at all.

// 09 • AI VOICE TECHNOLOGY

The technology behind the voice — explained simply.

You do not need to understand how Dentora works to use it. But for those who want to know, here is a plain-English explanation.

Listening — speech recognition

When a patient speaks, Dentora converts their voice into text using advanced speech recognition — the same technology used by smartphone voice assistants, but trained specifically on UK accents and dental terminology.

It handles background noise, regional accents, hesitations ("um", "erm"), and incomplete

Responding — natural voice synthesis

Dentora's response is converted back into speech using neural voice technology. The voice is configured during your setup — you choose the name, accent, and tone that best represents your practice. It sounds natural, warm, and human.

sentences. The recognition happens in real time, so the response is immediate — there is no obvious "processing" pause.

Understanding — the AI brain

Once the speech is converted to text, a large language model (the same category of technology as widely-publicised AI assistants) works out what the patient means — not just the words they said, but the intent behind them.

This is why Dentora can handle "I need to come in — my tooth is killing me" as an emergency, even though the word "emergency" was never said.

Multiple providers, always available

Dentora does not rely on a single AI provider. If one system has an outage, Dentora automatically switches to a backup provider in milliseconds — meaning your phone is never down due to a third-party issue.

Custom voice & persona

On the Growth and Enterprise plans, you can configure a custom AI persona — a name, a personality, a specific greeting style. Your AI receptionist can be "Sophie at Oakfield Dental" rather than a generic assistant.

Neural voice synthesis

UK accent trained

Real-time speech recognition

Automatic provider failover

Custom voice configuration

Dental terminology aware

// 10 · MULTI-LOCATION & GROUP PRACTICES

One platform, every location.

Dentora is built for dental groups and DSOs from the ground up. Each location operates independently, with its own calendar, FAQ set, voice profile, and analytics — all managed from a single login.

Separate identity per location

Each practice location has its own Dentora persona — its own name, voice, FAQs, pricing, and booking rules. Patients at each site experience a consistent, location-specific receptionist.

Strict data isolation

Patient data from Location A is completely invisible to Location B, even within the same group. This is enforced at the database level — it is not just a permission setting that could be accidentally changed.

Group-level analytics

See total call volumes, booking rates, and performance metrics across the whole group, or drill down into any individual location for detailed insight.

Centralised team management

Add staff members to one or multiple locations. Control who can see and amend data for which sites. Full audit trail across all locations.

Enterprise plan customers receive a dedicated account manager, custom SLA guarantees, on-site onboarding support, and bespoke integration with practice management systems (PMS). Contact us to discuss your group's specific requirements.

// 11 · SECURITY & DATA PROTECTION

Patient data protected to the highest standard.

Patient data is among the most sensitive information that exists. Dentora is engineered — not just configured — to protect it. Every architectural decision puts data security first.

AES-256 encryption at rest

Every patient name, phone number, date of birth, and clinical note stored by Dentora is encrypted using AES-256-GCM — the same standard used by UK high street banks. Even if someone obtained a copy of the database, the data would be completely unreadable without the encryption keys.

Encrypted in transit

All data moving between your browser, the Dentora servers, and any integrated systems is encrypted using TLS 1.3 — the strongest current standard. No data travels over the internet in a readable form.

Data stays in the UK

All Dentora infrastructure is hosted in the United Kingdom. Patient data is never transferred to servers in other countries. You remain the data controller at all times, in full compliance with UK GDPR and ICO requirements.

Multi-factor authentication

All staff accounts require two-factor authentication — a password plus a time-based one-time code from an authenticator app (the same method used by most banking apps). A stolen password alone cannot access patient data.

Tamper-proof audit log

Every access to patient data, every booking, every staff action, and every configuration change is recorded in a write-once audit log with a precise timestamp and the identity of the user responsible. This log cannot be edited or deleted.

Complete tenant isolation

It is architecturally impossible for one practice's data to be seen by another. Each practice exists in a completely separate data partition. This is enforced in the code — not just in access permissions.

Automatic data retention enforcement

Call transcripts: 2 years

Retained for the standard clinical records period, then permanently deleted automatically. No manual housekeeping required.

Audit logs: 7 years

Retained for 7 years in line with NHS data governance guidance for healthcare records, then automatically removed.

Built around patient rights, not bolted on afterwards.

UK GDPR gives patients specific legal rights over their personal data. Dentora is designed so that your practice can fulfil every one of these rights without any manual work.

Patient Right (UK GDPR)	How Dentora supports it
Article 15 — Right to access Patient can request a copy of all their data	One-click data export from the dashboard produces a complete, readable record of all information held about that patient
Article 17 — Right to erasure "Right to be forgotten"	A single erasure request triggers an automatic cascade deletion of all patient data — bookings, call records, transcripts — across every system. Nothing is missed.
Article 20 — Right to portability Patient can take their data elsewhere	Patient data export is provided in a standard machine-readable format, ready for transfer to any other system
Article 25 — Privacy by design Data protection built in from the start	Dentora's entire architecture was designed with privacy as a core requirement — encryption, minimal data collection, and access controls are not added features; they are the foundation
Article 30 — Records of processing Maintain records of how data is processed	The audit log provides a complete, timestamped record of every processing activity — ready for ICO inspection at any time

ICO notification made simple. Dentora provides a data processing addendum and a technical security summary that your practice can use directly in your ICO registration documentation. Our compliance team is available to advise practice managers on their specific obligations.

Dentora processes patient data only for the specific purpose of handling calls and bookings on behalf of your practice. It does not sell, share, or use patient data for any other purpose — ever. Your

practice remains the data controller; Dentora acts as a data processor under a formal Data Processing Agreement (DPA) provided at sign-up.

// 13 · SETUP & INTEGRATION

Live in 15 minutes. No IT team required.

Getting started with Dentora is genuinely simple. There is no hardware to install, no software to configure beyond a web browser, and no IT knowledge required.

STEP 1 — 2 MINUTES

Create your account

Sign up at dentora.ai. Enter your practice name, address, phone number, and the email addresses of the staff members who will use the dashboard.

STEP 2 — 1 MINUTE

Connect Google Calendar

Click "Connect Google Calendar" and sign in with your practice Google account. Dentora immediately sees your live schedule and can start booking into it. If you use multiple calendars for different dentists, all are connected in the same step.

STEP 3 — 5 MINUTES

Upload your practice information

Drag and drop your FAQ document, pricing list, and any other materials you want Dentora to reference on calls. This can be a Word document, a PDF, or even a simple email you forward to a setup address. Dentora reads and learns from whatever you provide.

STEP 4 — 5 MINUTES

Configure your voice and greeting

Choose a voice style (warm, professional, friendly), enter your greeting script (or use our template), and set your out-of-hours message. You can listen to a preview before going live.

● **STEP 5 — 2 MINUTES**

Forward your calls and go live

Set up call forwarding on your existing practice phone number — this is a standard feature on all UK phone systems and takes about two minutes with your phone provider. From that moment, Dentora is answering your calls. You can test it by calling your own number.

What Dentora integrates with today

Google Calendar

Full two-way sync, multiple dentist calendars, real-time availability

Email (all providers)

Call summaries, escalation alerts, and booking confirmations to any inbox

Document upload

Any PDF, Word doc, or text file used to train Dentora on your practice

Practice management system (PMS) integration — direct two-way integration with Exact, Dentally, SOE Dental, and other UK PMS platforms is available on the Enterprise plan. Contact our team to discuss your system.

// 14 · **PRICING & PLANS**

Simple, transparent pricing. No surprises.

No setup fees. No long-term contracts. Cancel anytime from your dashboard. Every plan includes UK GDPR compliance, AES-256 encryption, and UK-based data hosting.

Starter

£149

per month, billed monthly

Perfect for single-location practices getting started with AI telephony.

- ✓ 300 AI-handled calls per month
- ✓ Appointment booking & scheduling
- ✓ Basic patient Q&A (FAQ)
- ✓ Google Calendar sync
- ✓ Email call summaries
- ✓ UK GDPR compliant
- ✓ Standard voice & greeting
- ✓ Email support (24h response)

MOST POPULAR

Growth

£299

per month, billed monthly

For practices ready to fully automate their front desk operations.

- ✓ Unlimited AI-handled calls
- ✓ Everything in Starter
- ✓ Real-time analytics dashboard
- ✓ Staff review & approval workflow
- ✓ No-show reminders & follow-ups
- ✓ Emergency call triage
- ✓ Custom voice persona & greeting
- ✓ Priority support (4h response)
- ✓ Call recording access

Enterprise

Custom

bespoke annual pricing

Multi-location groups and DSOs with bespoke requirements and volume.

- ✓ Unlimited locations
- ✓ Everything in Growth
- ✓ PMS direct integration
- ✓ Dedicated account manager
- ✓ Written SLA guarantee
- ✓ Group-level analytics
- ✓ On-site onboarding & training
- ✓ 1-hour priority support SLA
- ✓ Custom contract & DPA

What is included in every plan

AES-256 encryption

Bank-grade data security on every plan, always.

UK GDPR compliance

Full compliance, Data Processing Agreement, and ICO-ready documentation.

99.9% uptime guarantee

Your phone is always answered. Dentora has redundant infrastructure across multiple providers.

// 15 · RETURN ON INVESTMENT

What Dentora saves — and earns — your practice.

For most practices, Dentora pays for itself within the first month. Here is a realistic breakdown of where the value comes from.

Cost comparison: Dentora vs. additional receptionist

Cost item	Additional receptionist (FTE)	Dentora Growth plan
Monthly cost	£2,100–£2,700 (salary + NI + holiday)	£299/month
Hours of availability	160 hours/month (Mon–Fri, 9–5)	720+ hours/month (24/7)
Sick days / absences	Average 6 days/year in UK	Zero
Training required	2–4 weeks onboarding	15 minutes setup
Holiday cover	Additional cost required	Included, always on

Cost item	Additional receptionist (FTE)	Dentora Growth plan
Calls answered out of hours	None	All of them

Revenue recovered from missed calls

If your practice currently misses 15 calls per week (a conservative estimate for a busy practice), and 8 of those callers wanted to book a new appointment with an average first-visit value of £95:

32

MISSED APPOINTMENTS
PER MONTH (EST.)

£3,040

REVENUE RECOVERED PER
MONTH

10x

RETURN ON DENTORA
GROWTH PLAN COST

The break-even point for most practices is fewer than 4 recovered appointments per month. At £299/month for Growth, recovering just 4 appointments at £95 each covers the entire cost of Dentora — before accounting for staff time saved, out-of-hours coverage, or reduced no-shows.

Staff time reclaimed

Average time saved per day

Based on practices using Dentora, reception teams report saving between 2 and 4 hours per day on routine call handling. That is time redirected to patient-facing care, treatment coordination, and tasks that genuinely need a human.

Staff satisfaction

Repetitive, high-volume phone calls are a leading cause of receptionist burnout. Practices using Dentora consistently report higher team satisfaction scores and reduced turnover — which has its own significant cost benefit.

Questions practices ask before signing up.

Below are the most common questions from practice owners and managers considering Dentora, answered plainly and honestly.

About Dentora itself

Question	Answer
Will patients know they are speaking to an AI?	Dentora is transparent about being an AI if asked directly. In practice, most patients focus on whether their call is handled quickly and professionally — and Dentora delivers that on every call.
What happens when Dentora cannot answer a question?	Dentora escalates unknown questions to your team immediately. It never makes up an answer or says something incorrect. It apologises, takes the patient's number, and ensures a staff member calls back.
Can it handle different accents and languages?	Yes — Dentora is trained on a wide range of UK accents and handles them reliably. For non-English speaking patients, escalation to a bilingual team member is configured during setup.
What if I want to listen to a call after it happened?	Every call is recorded and available in your dashboard. You can listen to any call at any time, alongside the transcript and AI summary.

About setup and contracts

Question	Answer
Is there a setup fee or any hidden costs?	No. The monthly subscription is the only cost. There are no setup fees, training fees, or per-call charges on Growth and Enterprise plans.
Can I cancel at any time?	Yes — you can cancel from your dashboard at any time. There are no minimum contract periods on monthly billing, and no cancellation penalties.
Do I need to change my phone number?	No. Dentora works with your existing practice number via call forwarding — a standard, reversible change that takes about two minutes with any UK phone provider.

Question	Answer
What if I want Dentora to only handle calls outside office hours?	Dentora can be configured to answer only when your team is unavailable — evenings, weekends, and bank holidays. You choose exactly when it operates.

About data and security

Question	Answer
Who owns the patient data?	You do, always. Dentora processes data on your behalf as a data processor under a formal Data Processing Agreement. The data belongs to your practice.
Where is patient data stored?	All data is stored on servers in the United Kingdom. No patient data is sent to servers in the USA, Europe, or anywhere outside the UK.
Can Dentora engineers see patient data?	No. Patient data is encrypted with keys that Dentora engineers do not have access to. The system is designed so that even internal staff cannot read patient records.

// 17 · SUPPORT & ONGOING HELP

We are with you from day one.

Getting set up with Dentora is just the beginning. Our team is available to help your practice get the most from the platform at every stage.

Email support

All plans include email support with a guaranteed response time. Starter: 24 hours. Growth: 4 hours. Enterprise: 1 hour.

Phone & live chat

Growth and Enterprise customers can reach us by phone or live chat during UK business hours, Monday to Friday.

Onboarding walkthrough

Every new customer receives a live onboarding call with our team — we walk through setup together and answer any questions.

Help centre

A comprehensive, plain-English help centre covers every feature with step-by-step guides, videos, and troubleshooting answers.

Regular platform updates

Dentora is actively developed. New features, improved AI models, and expanded integrations are released regularly — automatically available to all customers.

Dedicated account manager

Enterprise customers receive a dedicated account manager who proactively monitors usage, shares optimisation tips, and is your single point of contact.

99.9% platform uptime guarantee. Dentora is built on redundant infrastructure across multiple providers. In the event of any issue, our on-call engineering team is paged automatically — and your calls continue to be answered by our backup systems while any issue is resolved.

Ready when you are.

There is no long sales process, no IT project, and no risk. You can have Dentora answering your calls today.

Option 1 — Self-serve sign-up

Visit **dentora.ai** and create your account in under two minutes. Follow the setup guide, connect your Google Calendar, upload your practice information, and go live. Most practices complete the whole process in under 15 minutes.

You will have access to the Growth plan features free for your first 14 days. No credit card required to start.

Option 2 — Guided demonstration

If you would like to see Dentora in action before committing, we offer a personalised 30-minute demonstration via video call. A member of our team will walk you through a live call, the dashboard, and answer your specific questions.

To book a demonstration, email **hello@dentora.ai** or call us Monday–Friday, 9am–5:30pm.

What to prepare before your first call

- ✓ Your practice's Google account login details (for calendar connection)
- ✓ A current list of FAQs your reception team answer most frequently
- ✓ Your current fee guide or pricing list (PDF or Word document)
- ✓ The names and working days of each dentist at your practice
- ✓ Your preferred greeting style and the name you want Dentora to use

Not sure what to prepare? Don't worry — our onboarding team can work with whatever you have. Even a simple email with your practice's basic information is enough to get started. Dentora's knowledge can be expanded and refined at any time after going live.
